IMPROVING LAND GOVERNANCE AND **SECURING LAND RIGHTS** FOR LANDLESS AND VULNERABLE PEOPLE

VALUES

» **Multi-stakeholderism and partnership**

The Land Portal works across stakeholder groups, and promotes recognition of the importance of multi-stakeholder participation in land governance. The Land Portal is an unbranded partnership project.

» **Open development**

The Land Portal is based on open sources, open data and open content. It promotes open approaches with partners, seeking to catalyze and support greater sharing, collaboration and innovation in the land governance community.

» **Local ownership**

The Land Portal is on the path towards becoming a decentralized and distributed structure, in which content creation and dissemination takes place through local partners, groups and networks, supported and facilitated by the Land Portal team.

LINKED OPEN DATA AND LAND GOVERNANCE

WHAT IS LINKED OPEN DATA?

Linked Open Data is a way of **enriching, connecting, and linking data in structured, machine readable and standardized formats under open licenses**. Linked Open Data enables the same content to be represented in multiple ways in different places simultaneously.

HOW CAN IT IMPROVE LAND GOVERNANCE?

The Land Portal uses Linked Open Data to **combine data about land issues from diverse and credible sources** around the world, enabling easy data exploration, manipulation and customization.

BUILDING TECHNICAL CAPACITY FOR LINKED OPEN DATA

The **Land Portal is committed to developing a Linked Open Data ecosystem** through a collaborative approach to technical challenges, making its software and other tools freely available to others.
